Phase Change Energy Solutions: Leader in Efficient ... Phase Change Energy Solutions is a global leader in the development and deployment of innovative energy-efficiency and thermal storage solutions that harness the power of phase change materials. Customers including the U.S. Government, regional retail chains, and Fortune 100 banking, telecom, hospitality, and technology companies have installed millions of square feet of our products with proven results. Phase-change material - Wikipedia A phase change material (PCM) is a substance with a high heat of fusion which, melting and solidifying at a certain temperature, is capable of storing and releasing large amounts of energy. Heat is absorbed or released when the material changes from solid to liquid and vice versa; thus, PCMs are classified as latent heat storage (LHS) units. PCM Products - Official Site Phase Change Materials (PCMs) are ideal products for thermal management solutions. This is because they store and release thermal energy during the process of melting & freezing (changing from one phase to another).

Frequently asked questions about phase change materials Phase change materials (PCM) are substances that absorb and release thermal energy during the process of melting and freezing. When a PCM freezes, it releases a large amount of energy in the form of latent heat at a relatively constant temperature. Phase Change Material (PCM) Selection | PCM Technology Other PCM materials such as non-paraffin organics, and liquid-to-gas phase change materials are available, but are not often used for electronics heat sinks. Metallic PCMs are generally used at high temperatures, where no suitable paraffin wax is available. Table 1. Phase-Change Material (PCM) - C-Therm - Thermal ... Phase change materials (PCMs) are widely used in energy-efficiency initiatives for Thermal Energy Storage (TES). PCMs are interesting because they store the thermal energy of a phase change, called the "latent" heat of phase change, on heating, and then when cooled, they can give off the stored heat by reversing the phase change (Figure 1. What is Phase Change Material? | Cryopak A Phase Change Material (PCM) provides advanced thermal protection when shipping temperature-sensitive products. When PCMs melt and freeze, or change phases of matter between solid and liquid, they maintain a constant temperature equal to their melting/freezing point. Phase Change Fabrics Control Temperature - NASA phase change materials (mPCMs) into all of its products, including automobile seat covers, bedding products, and a full line of apparel for both ordinary and extreme conditions.

CrodaThermâ„¢ Bio-based Phase Change Materials Phase Change Materials We manufacture bio-based PCMs that utilise our expertise in organic, plant based chemistries; they are not paraffinics or salt hydrates. CrodaTherm PCMs melt to absorb heat and solidify to release heat at defined, specific temperatures.
